

COMMUNICATION & WORKS DEPARTMENT
GOVERNMENT OF THE PUNJAB

TRAFFIC SUMMARY - 2022

PUNJAB HIGHWAYS

PLANNING & DESIGN DIRECTORATE
HIGHWAYS
2- LAKE ROAD LAHORE

PREFACE

Roads are the most important segment of infrastructure in any developing country and vital to economic development, trade and social integration, which rely on the transportation of both people and goods. Easy accessibility, flexibility of operations, door-to-door service and reliability have earned road transport an increasingly higher share of both passenger and freight traffic vis-à-vis other transport modes. The road network in Pakistan carries over 96 percent of inland freight and 92 percent of passenger traffic and are undoubtedly the backbone of the economy. The Punjab province is playing pivotal role in the economy of Pakistan by contributing almost 60 percent to total agricultural production of the country and is the largest province in term of population, dominates other provinces in contributing to the national economy.

As of 2022, the total road-network in Pakistan is about 265000 kilometers; consists of 9500kms. (3.58%) of National Highways and 3400kms of Motorways (1.28%). The rest of the road network comprises of roads of the respective provinces or local administration e.g. Cantonment Boards, Municipal Corporations, Local Development Authorities, etc. Approximately, 108500Kms (41%) of total roads falls in the province of Punjab out of which about 82000Kms (31%) pertain to Communication & Works Department.

Communication and Works Department (CWD) is the major department responsible for planning, execution, operation and maintenance of roads in Punjab and has outlined vision, strategy and guidelines which are generally observed during formulation of Annual Development Program. The department envisages construction of a high-quality infrastructure as planning, constructing and maintaining road network in public sector under need driven and cost-effective regimes aiming at providing best possible means of communication to the general public.

Traffic Data Collection and projections thereof of traffic volumes are basic requirements for planning of road development and management schemes. Therefore, the traffic data collection and analysis follow varying trends and plays an important role in the evaluation and management of road network schemes.

The major areas for which this data is required are:

- Planning prioritization and project initiation
- Project design
- Planning maintenance
- National Transport Statistics
- Road Safety Measures
- Traffic Control

Some of the key areas in which traffic data is needed for development and management of the road network include:

- a) Determination of a programme of road widening needs and general improvement or strengthening of existing road through a program of reconstruction and construction of new roads;
- b) To check the efficiency of the road network by comparing current traffic volume with the level of service or the calculated capacity;
- c) To establish the relationship between traffic volume, number of accidents and causes thereof, as well as determination of the probable occurrences;
- d) To plan prioritization of roads improvement schemes;
- e) To assess economic benefits arising from roads improvements;
- f) Investigation of various capacity and design problems for both roads and bridges as well as Design and improvement of new/existing junctions;
- g) Determination of warrants or the need for implementation of traffic improvement and traffic control measures, such as synchronized/coordinated traffic signals, stop signs, one-way roads, no entry, etc.;
- h) To study future traffic trends and assisting in predicting traffic volume in the future for a given period

Traffic counting falls in two main categories, namely; manual counts and automatic counts. There is no distinct difference between the two methods however, the economic use or selection of an appropriate method of traffic counting is a function of the level of traffic flow and the required data quality. Currently P & D directorate of Punjab Planning & Design Department is collecting traffic data manually. However, Communication & Works Department is working on automatic traffic count to ensure quality of traffic data and to minimize any potential error in the data. The procurement of latest equipments and tools for automatic traffic count are underway and it is expected that this system will be operational in the forthcoming year.

Main input parameters for design of the road are the Annual Average Daily Traffic (AADT) and the cumulative loading over the design life of the road (normally 10 years). Annual Average Daily Traffic (AADT) in transportation engineering is calculated by adding the total vehicle volume of a highway for a year divided by 365 days. It is one of the most important traffic measures used in any transportation related projects (i.e. roadway design, transportation planning, traffic safety analysis and highway maintenance). It is also an important input variable for safety analysis.

Currently, Planning & Design Directorate Highways has been entrusted with this meticulous task of conducting and updating of traffic survey in Punjab since its inception in 1971. This survey has been conducted through traffic count stations for each calendar year and documented on a yearly basis. Moreover, Keeping up with the demands of contemporary digital age, the data therein, has also been digitized and made available for the departmental and academic use.

On account of Acute Shortage of Staff, Six (06) out of Eight (08) regular Traffic Survey parties each headed by Traffic Count Supervisor along with a Special Traffic Survey party for Origin and Destination Survey, Special Bridge and Toll Plazas Survey headed by Supervisor (Programming & Reference Survey), carry out manual counts using statistical methodology round the clock on respective traffic count stations falling in the Jurisdiction of each assigned districts. These stations have been classified into the following categories with regard to the importance imparted to a road.

- a. Permanent Traffic Count Stations : (two continuous count per quarter)
- b. Semi-Permanent Stations : (24 hours count per quarter)
- c. Temporary Station : (24 hours count per annum)

The vehicular traffic data obtained is expressed in term of Passenger Car Unit (PCU); an internationally accepted unit used for design is based on following assumptions:

- a. Motor cycle/Rickshaw/Car/Mini bus : 1 PCU
- b. Bus/Truck : 3 PCU
- c. Tractor Agriculture/Tractor Trolley/Trailer Unit : 5 PCU
- d. Animal Drawn Vehicles : 7 PCU

This document has been developed and published as a denouement of assiduous effort of our traffic survey teams deployed on various permanent, semi-permanent and temporary stations who worked round the clock, tirelessly, to conduct the count manually using statistical techniques. These teams covered almost all the main roads of Punjab, maintained and operated by Highways Department. The collected data is then scrutinized by the senior officials with due exactitude to ensure its accuracy and to eradicate any error, therein; which is eventually published when declared apt.

Deep appreciation, continuous guidance and valuable suggestions of Mr. Shahid Manzoor ul Hassan (Deputy Director L&S) were instrumental in preparation and compilation of Traffic Summary 2022. Furthermore, Mr. Muhammad Idrees Assistant Design Officer & Mr. Shafiq Ur Rehman Assistant Design Officer & the efforts of the field formations and desk work of office staff involved in compilation and publication of this document are really admirable who performed their duty and professional services with full zeal even beyond call of duty for successful publishing of Traffic Summary 2022

IMTIAZ AHMED
